*Tools and Methods of Program Analysis Conference (TMPA 2017)
Years ago when we started teaching this course ...*

Course Outline

- The course **FU15 “Introduction to Data Management”** is focuses on representing the following conceptual units:
 - **Foundation concepts** necessary for introducing basic data management principles
 - Information, data, knowledge, wisdom
 - **Data modeling** approaches, implementation and practical use
 - Why to model and how to model
 - Methods and practicality of **data storage, processing, presentation, versioning, distribution, and backup.**
 - Accessing and storing data with using **database systems** and **specialized data management systems.**
 - Data and **Software**

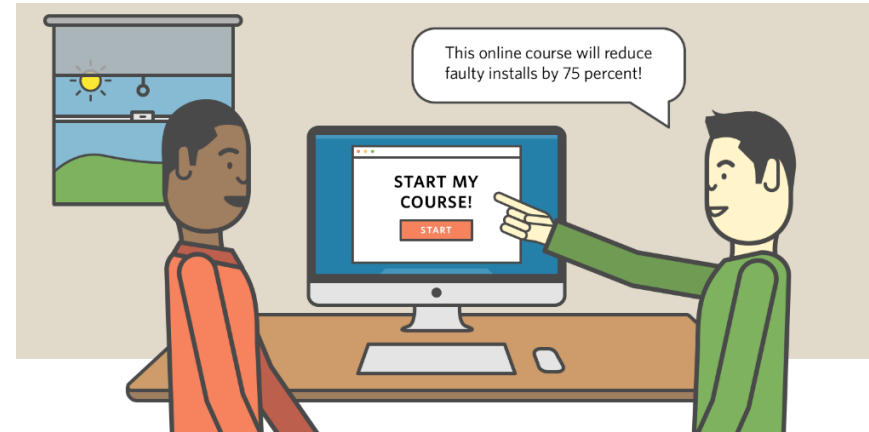

Course Vision

- The objective of this course is
 - ...to introduce data management as a **research and technology domain** with its distinct agenda,
 - ...to explain data models and modeling approaches used in present-day information systems,
 - ...to learn “how-to” on real-life daily scenarios of data modeling, storage, and retrieval
- The course will serve as a basis for subsequent specialized courses such as *Database management systems*, or *Operating systems*.

Course Workflow

■ Normally

- Tue
 - 1st + 2nd periods: Lecture
- Fri
 - 1st + 2nd periods: Lecture
 - 3rd + 4th periods: Exercise

- ## ■ Announcements, online access, broadcasting...
- Check your mail for urgent announcements on the way

■ FU15 Introduction to Data Management [ex]

- **Live lecture materials $\neq$ Materials posted on LMS**

Major Activities

■ Lectures

- 2 lectures per week (2x2=4 periods)
- Quizzes on Moodle
 - Quiz is open **right after the lecture**
 - Quiz is usually open **till 23.55 of the day before the next lecture**
 - Quiz time: Normally, **15 to 20 minutes (strict requirement!)**
 - **1 attempt** is allowed (**no extension or additional attempts**)

■ Exercises

- 1 exercise class per week (2 periods)
- 1 exercise topic usually covers 1 week
- Submission: **by 23.55 of the day before the next exercise**
- Evaluation: **see exercise descriptions**

Evaluation and Grading

- Final grading:
 - Tests and quizzes during lecture and hands-on time **40%**
 - Exercises (individual projects) **30%**
 - Final quiz (during the last exercise session) **30%**
- Additional bonus points may be given by the course instructors for active participation in classroom activities and high quality creative exercise solutions
- Bonus points are used to compensate the possible grade deficit for major course activities up to 20%

Exercises

If there are problems,
contact your **exercise
teacher or TA**
immediately!!!

■ Getting started:

1. Check that you can access the course on Moodle using the University of Aizu LMS
2. Check that you can download, open and understand the relevant lecture materials
3. Read the explanations given for the exercise and complete it according to these explanations
4. Exercise submission is normally a **zip** file (there might be exceptions, follow the teacher's instruction)
5. Strictly respect the deadlines!

How to name your submission file

Example

Your ID	-	e	Exercise Number	.zip
---------	---	---	--------------------	------

s1250033-e1.zip
